Most Human Papillomavirus (HPV) associated cancers can be **prevented with vaccination**. Nearly all adults will be exposed to HPV in their lifetime. Most will never know they have been infected.

**Idaho Goal**: 80% vaccination rate of Idahoans aged 13-17 by 2025

**HPV-Associated Cancers**

Rate of adults diagnosed with HPV associated cancers

(rates per 100,000)

**HPV-Associated Oropharyngeal & Cervical Cancer**

In Idaho, more males were diagnosed with HPV-associated oropharyngeal cancer than females diagnosed with HPV-associated cervical cancer during 2016-2020.

**Cancers Attributable to HPV by Site**

- Anal
- Cervical
- Oropharyngeal
- Penile
- Rectal
- Vaginal
- Vulvar

**Call to Action**

- Provide or refer patients to complete HPV vaccination series, both males and females
- Recommend HPV vaccine along with other immunizations, not as a separate recommendation
- Discuss HPV vaccination as a cancer prevention strategy
- Implement patient reminder systems to encourage series completion

**HPV Vaccination Rate Trendline**

- **Goal**: 80% vaccination rate
- **2016**: 33.2%
- **2021**: 58.5% U.S.¹
- **2021**: 47.5% Idaho²
